

Are you ready for BYOD?

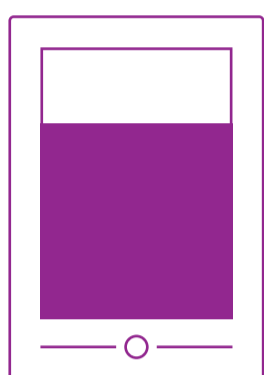

The rapid adoption of smartphones and tablets is changing the consumption of IT from the traditional culture where technology was controlled, enabled and managed by the IT team.

Today

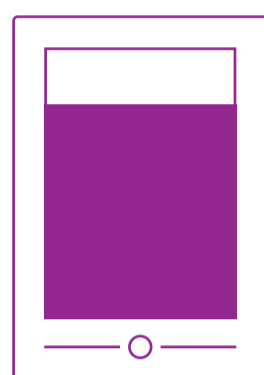

72%

of employers allow employees to use their own devices

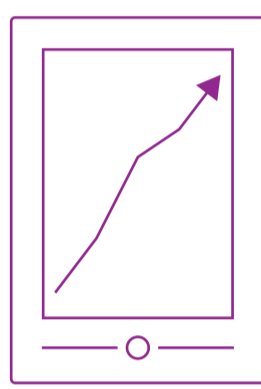

79%

of employees view mobile devices as critical to maximising productivity

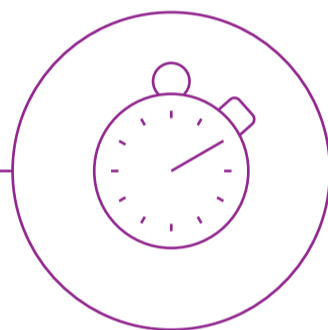

Employees have the consistency and convenience of 1 device, for personal and business use

Employers benefit from reduction in CapEx and improved productivity

Are you ready?

1

Is your network ready for more complexity?

- Can you quickly and easily scale network bandwidth?
- Is your IT environment virtualised?

YES

2

Can your helpdesk handle the increase in calls?

- Do you have sufficient skills and resources in house to support a variety of device configurations and network connections?

YES

3

Are your employees' personal mobile devices secure?

- Do you have encryption in place to keep data secure at all times?
- Do you have the ability to wipe a device remotely, should it be lost or stolen?

YES

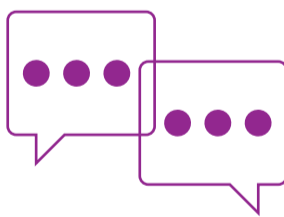

4

Is your App Store open for business?

- Have you already, or are you able to, extend existing business applications to mobile devices?

YES

- Have you communicated your BYOD policies to ensure a compliance-savvy workforce?

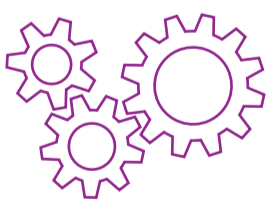

8

Are all of your employees aware?

YES

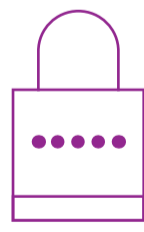

5

Are new services ready to roll out?

- Do you have the infrastructure and tools in place to ensure a good user experience?

YES

- Are you able to control, monitor and manage access effectively?

7

Can you secure the new services?

6

Are management policies and procedures set?

YES
