# Everyone Everywhere Is A Target...

# What Happens If Your Business Is Next?

As data is the new currency for the modern enterprise it is one of, if not the, most valuable assets in your business. It is no longer a matter of '*if*', but '*when*' your organisation will be subject to a cyber-attack. You need to take positive action today to secure your business-critical assets and ensure service continuity in the event of a breach.

It can take up to 197 days for an organisation to identify a breach and 67 days to contain it *(Ponemon Institute, 2018)*. Research has also shown that the quicker a company contains a breach the less money it costs. More than 80% of businesses having experienced a breach are no longer trading after 2 years.

## Mitigating Risk

The harsh reality is that no organisation will ever be 100% safe from cyber-crime, therefore it's all about mitigating risk.

You need to identify your valuable business critical assets: data, reputation, services, finance etc and ensure that in the event of a breach you are able to rapidly detect, manage and resolve threats in order to minimise impact and maintain control of your business.

**Remember it can take years to build your reputation but seconds to lose it!**

## Ask yourself...

**1** Would you detect a breach & how long would it take?

**2** What would you do to respond to a breach?

**3** What would be the impact on your business?

**4** Would your business & reputation survive?

**Detect** - Rapid Insights Into Threats
SIEM - Threat Detection

**Protect** - Safeguard Business Critical Services
Managed Firewall • Patch Management

**Secure** - Protect Critical Data & Digital Assets
Endpoint Encryption

**Respond** - With Confidence
Penetration Testing • Security Assessment
Security Awareness Training •
Incident Response

**Citadel Security** platform is a modular approach to cyber security that can stand-alone or combine into a powerful solution to address security challenges in the detection, management & resolution of cyber security threats.

## Detect
**Rapid Insights Into Threats**

SIEM - Threat Detection

Monitor threats to your network in real-time to detect & prioritise incidents that pose a risk to data & service integrity with **Security Information Event Management (SIEM)**

## Protect
**Safeguard Business Critical Services**

Managed Firewall

Patch Management

Securely monitor & manage the perimeter of your network with log collection & analysis with **Managed Firewall**. Proactively reduce security risk & patch vulnerability exposure with automated **Patch Management**.

## Secure
**Protect Critical Data & Digital Assets**

Endpoint Encryption

Safeguard your data should you be breached with fully managed **Endpoint Encryption** for all devices.
## Respond
**With Confidence**

Penetration Testing

Security Assessment

Security Awareness Training

Incident Response

Assess your organisation's cyber security response with **Penetration Testing & Security Assessments**. Provide employee Security Awareness Training from server room to boardroom, helping reduce insider threat. Let trained **Incident Response** security experts help & support you to analyse & respond to advanced persistent threats & attacks.

# CELERITY

Celerity, working in partnership with NCSC, regional cyber protection units & certified industry specialists to fight the war on cyber-crime

ISO 27001 CERTIFIED
